Do we know (from a technical standpoint) that the lead is from the iron oxide, lime, & calcium sulfate sludge that Gilbert & Bennet had permit to dispose of at the site? This seems significant for decision about formal notice letter. G&B are on informal notice about link to the site because of 104(e) sent to them and your discussions with them. I think the decision about an order is up to Paul and you; my sense is that you're prepared to have EPA do work (at least until we know whether or not more extensive work is required). Let me know if you want to set up conference call. I'm out Thurs 4/16. thanks.
